

Having difficulty visualizing your design?
Utilize our advanced 3D rendering capabilities!

EXTERIOR 3D RENDERINGS PLACED ON ACTUAL PROPERTY PHOTO

Wisconsin Log Homes uses the most updated and innovative software with virtual three-dimensional rendering capabilities to give our clients the ability to literally see what their home is going to look like, inside and out, during the design phase.

Our designers are able to use an actual photo of the clients' property and place a three-dimensional rendering of their custom design on it so they can see exactly how it will sit on their property. Clients can also see property views from different rooms and windows, and get a real feel for the home and its surroundings. Our technology also permits us to place the colors and building materials selected on the rendering providing an exact image of the finished home.

Interior rooms can be drawn three-dimensionally with specified finishing options so our clients can see what each room will look like and how the floor plan will live. They can determine everything from where they want interior log, beams or drywall, the flow of the kitchen, or the color stone they want for their fireplace. Before the floor plan is built, clients have the option to literally walk through their home via the computer. This valuable design option helps the decision making process by leaving nothing to the imagination and lowers the amount of changes during construction.
