

LIVABLE LUXURY AT ITS FINEST.

LOG, TIMBER & HYBRID HOMES
NATIONWIDE SINCE 1976

WISCONSINLOGHOMES.COM | 1.800.678.9107

YOUR DREAM. OUR EXPERTISE.

Since hand-scribing our first log home in 1976, Wisconsin Log Homes has evolved to become one of the world's leading designers, manufacturers and builders of the most elegant and energy efficient custom wood homes.

OUR PASSION IS YOUR HOME. OUR FOCUS IS YOU.

At Wisconsin Log Homes, we believe that dream experiences are just as important as dream homes. Anyone can offer custom design services and a materials package, but the quality of those materials and the type of service you'll receive before, during, and after your home is built is what really matters and sets our team apart from the rest. Our customers tell us that it's more than the quality of our homes and services that make Wisconsin Log Homes the best choice, it's the talented, dedicated, and caring people they are surrounded by that really creates the ultimate experience. Our team's openness, honesty, ingenuity, and our passion to make a difference while nurturing your ideas, is what allows us to build outstanding relationships **and** homes so you can realize your dreams.

HYBRID THERMAL-LOG™ BUILDING SYSTEM

Wisconsin Log Homes originated the Thermal-Log™ Building System in 1976. This system features an energy-smart core insulated wall that is air-tight and draft-free, and provides a structured framework that will not shrink or settle like other log home systems, resulting in a home that is much easier to maintain with proven durability to last for generations to come. Not only does this system allow for large expanses of glass walls, windows, and large open interiors with exceptionally high ceilings; but it also gives you freedom to use a hybrid combination of wood, stone, metal, or any other materials you prefer in a way that is effective and dramatic - without being overwhelming. You can mix and match whatever materials you like, wherever you like.

Our high performance building system blends the wisdom of modern day construction with the craftsmanship and beauty of log and timber homes, achieving up to R-50+ walls and R-65+ roof, translating into energy savings, no log-wall settling or air infiltration, less maintenance, and more comfort.

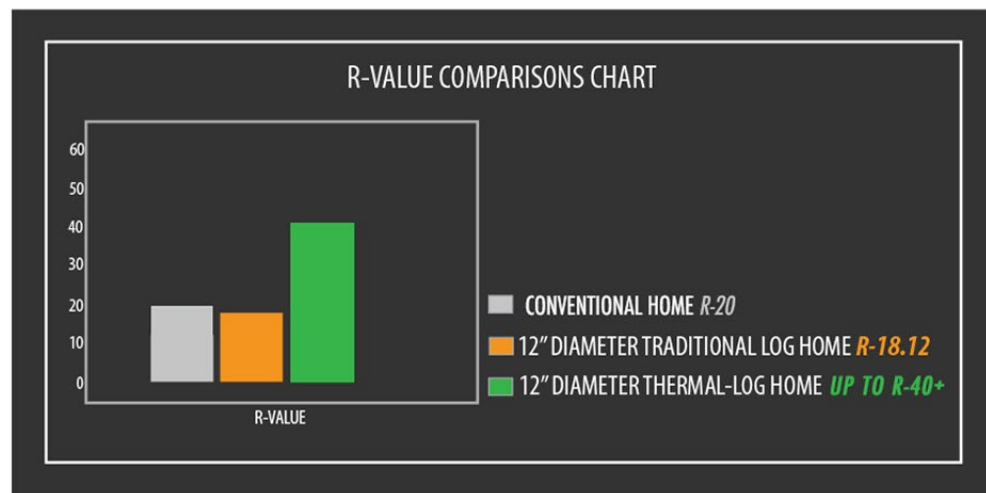

THERMAL-LOG™ VS TRADITIONAL-LOG

Softwoods have an R-value (insulating power or thermal resistance) of about 1.41 per inch. However, since logs can store and release energy, the R-value generally increases by 0.1+ per inch. Therefore, if you were to build a traditional 12-inch diameter log home, the log wall of your home will have a maximum R-value of about 18.12.

If you were to build a traditional 2x4 studded home with fiberglass insulation, sheathing, and wallboard, your wall will only contain an R-value of about 14.12. However, the disadvantage of traditional log homes is that they are susceptible to air leaks as the logs move, contract, and expand with climate changes, and the diameter of a log is never consistent.

For this reason, Wisconsin Log Homes pioneered the Thermal-Log™ Building System in 1976. This advanced hybrid system is unique because it combines the energy efficiency and thermal mass of logs, but eliminates all the disadvantages associated with traditional log home construction, all while more than doubling the R-value of your home.

NATIONAL DESIGN & BUILD SERVICES

Our proven Design Build Solution offers our clients personal and professional service through every stage of the process - including site planning, custom architectural design, turn-key construction, and full-service interior design and décor. The Wisconsin Log Homes experience maximizes efficiency and accountability, and simplifies the custom design and construction process for our clients from concept to completion.

ON-SITE DESIGN CONSULTATIONS

During the early design phase, we will gather information about your building site and decide if an on-site design consultation will be appropriate for your needs. At your site, we'll walk your property together and look for major views and setback issues like wetlands or area restrictions. We'll also consider topography and grade, and determine where the sun sets and rises. Taking all these details into consideration, we will discuss design possibilities that will maximize exposure and aesthetics, and create a home that will blend effortlessly into its surroundings.

IN-HOUSE DESIGN CONSULTATIONS

In the planning stage, you will have the opportunity to meet with your personal home consultant, design team, and in-house general contractor to discuss your project visions and cost parameters in detail. During these pressure-free meetings, we will discuss your ideas and expectations. We'll also discuss your project in detail, create conceptual sketches of your home's initial design if required, and determine turn-key cost parameters and design feasibility. It is our priority to make sure you are completely informed and comfortable before making a commitment to move forward. Creating a home that will fit your lifestyle is the most critical step in the process. Designing a home that balances innovation and functionality is the goal of everyone involved in building each dream home.

ARCHITECTURAL PLANNING & DESIGN

Before a dream home becomes a reality, it occupies space in your imagination. Our goal is to capture your visions and create a custom home plan that suits your needs, style, property, and budget. Our in-house design team will make themselves familiar with your needs and work with you one-on-one to create a plan that reflects your personal expectations and requirements.

NATIONAL TURN-KEY CONSTRUCTION

Each client is assisted with construction in one form or another during the Wisconsin Log Homes experience. Some may want help qualifying or selecting a builder in their area, while others decide to use our in-house, turn-key construction services. If you do not have a builder in mind, we can align you with the skilled construction crews who will meet the unique needs of you and your project.

FULL SERVICE INTERIOR DESIGN & DÉCOR

Working with clients from the planning stage through completion, our in-house Interior Designer will strive to understand your needs, dreams, and desires, and infuse those ideas into the beauty of a room that resonates with fresh and understated style.

Depending on your needs, your personal Interior Designer will:

- Help you discover and/or solidify the style you want for your home.
- Communicate the “big picture” as well as the details.
- Assist in creating a space that fits your lifestyle.
- Present innovative design ideas.
- Generate a furniture layout customized to your floor plan to give you a better sense of proportion.
- Offer a collection of resources to get the job done.
- Assist with exterior finish selections like stain, window cladding, hardware, and roof colors.
- Make a wealth of knowledge available to you.
- Help optimize your funds.
- Help you set realistic expectations regarding your look, budget, and timeline.

A CUSTOM HOME INSPIRED BY YOU

There is only one perfect home plan - the one custom-made to fit your personal needs and lifestyle. Wisconsin Log Homes has created thousands of home designs in all sizes and architectural styles. Some may be drawn from scratch while others "mix and match" various elements from existing floor plans. Since 1976, Wisconsin Log Homes has never designed the same home twice; every design is as unique as its owner.

PROVEN TECHNOLOGY FOR GREEN HOMES

Wisconsin Log Homes continually looks for technologies that keep pace with our changing lives - from the newest thinking on floor plan design to innovative materials to environmentally friendly building practices. Our building system features innovations like high density spray insulation, and efficient geothermal heating and cooling systems, along with the latest in window efficiency, to ensure every home meets or exceeds energy and structural codes, making our homes more energy-efficient, cost-efficient, healthy, and comfortable.

HOMES IN HARMONY WITH NATURE

Wisconsin Log Homes takes proper forest management seriously. The log and timber suppliers we partner with follow conscientious harvesting and reforestation practices, ensuring a continuous supply of quality trees. Innovative, ecologically sound silviculture programs have been implemented to replant and maintain harvested areas, planting about three trees for every one harvested. The latest technologies in road building and harvesting are used to ensure that the environment is impacted minimally. We believe that it is possible to live in harmony with nature by using our natural resources properly. You can be sure that by building a Wisconsin Log Home, you will be respecting and honoring the environment.
